

**FAQ\_100208:** How is the Inward no. generated for different Makes?

**Solution:**

1. We define the Make for different products in Parameter→Management→Make Master  
Here in Inward Character we specify some alphabetic/numeric character for make "Own Product" and "Loan License". But we specify only "\*" when the make is "Marketed By"

2. When the make is either "Own Product" or "Loan License" it has different way for generating Inward no. But when the make is "Marketed By" it will automatically take Own Products' inward no.
