

FAQ_100211: How to manage Remote Desktop Print output from Node (Client)?

Solution:

1. Copy the folder "**For RemortDesktop**" from Suite CD folder on server machine. (Recommendation: Save it in the Pharmasuite Folder).
2. There are two folders in the RemortDesktop folder as shown below:

ScrewDrivers Server v4.msi

ScrewDrivers Client v4.msi

- A. Run the setup named ScrewDrivers Server v4.msi on server machine.
Note: Click on "Next" if any pop-up messages are displayed.
- B. Run the setup named ScrewDrivers Client v4.msi on client machine.
Note: Click on "Next" if any pop-up messages are displayed.

Notes:

→Whenever the setup gets completed, restart the computer irrespective of whether the computer is server or node.

→If you have installed it on the client machine then the printer also should be connected to that client machine and the driver must be original.
